Cataract

Laser opening and lens fragmentation

Artificial lens implant

## MULTIFOCAL and Extended Depth of Focus Lens Implant (includes astigmatism correction)

Odyssey

PanOptix Pro

Vivity

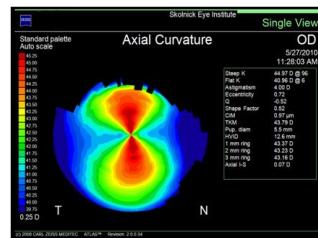

Apthera

**ASTIGMATISM** is an imperfection in the curvature or shape of the cornea that causes blurred vision and must be accounted for to have the best possible vision. It can be surgically corrected with laser (astigmatic keratotomy) or incorporated into the **Toric** lens implant.

Toric

Corneal Topography

**MONOFOCAL** Lens Implant - Basic and Single Vision packages includes the most advanced technology (Johnson & Johnson Eyhance™) - This implant performs better than a standard monofocal implant
